

Escape Academy: The Thresher

Escape Academy has come up with a new map in the new escape room. Here's how you can escape from this area. So, without any further ado, let's get started.

1st Floor

Open the green case on the stool to get the small key which will open the pad lock (camera position will shift beneath the lock). The box unlocked will display a lever, switch it on. Now you can see a fluorescent hand impression behind the player. Interact with it to get a clipper, a hammer and a screw driver. Now go to the darker region of the floor. Interact with the wall behind the curtain to get a message, "These nails are loose, but I can't pull them off with my hands" indicating that you need to use your hammer to pull them off. This will give you a message "FEAR", now turn off the lever to light up the room and fully revealing the message "WE ALL FEAR WATER". Then after, interact with the electronic device on the grate. The code is simple- "FEAR".

2nd Floor

First untie the blue valve handle using clipper and fit it amidst the red and yellow valve handles. Now inspect the clues over the warning signs, it states how many times you need to rotate each handle to unlock the door. Well, if you don't get it correct, here's the combination- 3 yellow turns, 4 blue turns and 6 red turns. Turn the valves to their respective numbers to open the door. Once you get inside rotate the wheel to pull up the rusty key. Hold on to it and get outside to open the padlock to get the handicam. Now put the handicam on the hook and submerge it by rotating the wheel. Now the monitor outside the steel door will give you the password- "WILL".

3rd Floor

First pick up the acrylic sheets from over the sofa and inside the cardboard box. Now get to the toilet and open the left toilet lid, which will have a safe manual attached underneath. There will be some yellow chart papers over which some lines might be drawn, attach those acrylic sheets over there. They will form numbers – 510. Now get near the safe, with a handle attached to it. Reading the safe manual, figure out the combination. Nevertheless, the combination is- circle, square, wheel, square. Click on them to open the safe and get the switch handle. Now head towards the electric box near the boat, turn the lock to the combination 510. Now attach the handle to the handle holder and then switch it on. Another fluorescent-colored letter will appear besides the three letters. Now the password to escape is "SLOW".

4th Floor

First pick up the strange devices from the table beside the grate. Now turn left and pick up the cipher sheet hanging on the pole. Take out the cipher sheet to interpret the letters scribbled on

the wall (check out both the walls). This will give you the words – “UNDER PRESSURE” and “OVER WEIGHT”.

Now search for water pressure valve and interact with the switch beneath it. As said, “UNDER PRESSURE”, place the strange device on “under” socket. It will display “UR”.

Similarly, search for water weight valve and place the strange device over the “over” socket. It will display “YO”. Combining both the password becomes “YOUR”.

5th Floor:

First smash the crate and pick up the old map. You can see four triangles on the middle of the map. Look up for those triangles on the squares; light up those squares only by setting up the correct electrical pattern. Now once you light up the squares now take a note on which sub square the triangle is. This will correspond to the correct order of password as there will be numbers engraved for the map.

After you get to know those letters put them into the correct order to give the password “MIND”.

Finally climb up the ladder, turn right to find out a machine like atms you find on roads. Click repost>retry which will give you the chance to enter the password. The correct sentence is “FEAR WILL SLOW YOUR MIND”.

That’s all!! You have escaped.
