

AI: The Somnium Files Nonuple-X and How to Solve

The adventurous visual novel video game developed by Spike Chun-soft, was released to be played in Windows, PlayStation 4 and Nintendo Switch. This game is full of puzzles which are like dream theories which retains in the cast's subconscious.

The investigation in Chapter 2 in Takikos's office, detective Ryuki asks for a keypad code which is obvious that it is jumbled. The solution is not as simple as you think. This guide will help you to solve the code. So, without any further ado, let's get started.

The Takiko's office is a perfect example of a classic detective scene where there is mystery of closed-door murder. The mystery states that there is no influx or outflux of any suspect at the murder room yet the murder took place that led to questioning her bodyguard. After recording his statement, now its time to solve the mystery.

You can roam hither and tither to observe the room and take a step forward. Interact with the moving statues that direct her desk and the infrared beams scanning the room. Switch between normal, infrared and x-ray to look upon all the clues, e.g., the numbers on the Takiko's desk (X-ray mode), the Nonuple-X design on the wall (normal mode), etc.

Once you have caught up with the Nonuple-X design, switch to X-ray mode to find out a hidden keypad behind the design. At last check it with infrared light, you will notice 7 glowing squares. Yet solving the puzzle will not be possible if you don't find another clue.

Complete examine the statues once again and unravel the rails which will make the statues to convey more information about the corpse. Then after Toma and Ryuki will enact how the killer might have got inside unnoticeable.

Successor to the event Toma asks Ryuki how to move the statues into places, to which the best answer will be: "Use Force". Soon she will ask for the code to the hidden keypad that was behind Nonuple-X design.

The key to solve the problem is the Nonuple-X design which matches with numbers on the desk. If you answer Toma incorrect a few rimes, she will scold you and overlap the two designs on top of each other. The alignment between the boxes at the bottom of the Nonuple-X and the X's that make up the design. Some basic multiplications will be required to figure out the right sequence. Multiply the numbers in each column and enter them into the keypad in the following order (note that, that each column with a zero will end up as zero:

4 9 0 1 0 9 5

This will earn you praise from Toma for you excellent effort. Well, appreciation at the end is what a Gamer needs!!
